About Tunzar

Following an intensive five-month market research phase across the Nairobi Metropolitan Area—a fast growing economy with a market of over 6 million residents— Tunzar was founded to address a gap in the fresh market delivery sector, a critical inefficiency: the lack of reliable, fast, and trustworthy access to fresh organic farm produce for urban consumers. Tunzar is a comprehensive mobile and web-based e-commerce application that enables customers to purchase fresh fruits, vegetables, and essential groceries online and have them delivered directly to their doorstep within the city. Tunzar operates on a scalable, asset-light marketplace model. We enforce rigorous quality and packaging standards at the source, partnering with key suppliers and farmers within the city, and leverage existing third-party logistics infrastructure (such as Bolt) to execute last-mile delivery. The Result: A superior customer experience guaranteed by doorstep delivery in under two hours, ensuring peak freshness and reliability. Tunzar not only captures a significant share of Nairobi's daily grocery spend but also empowers local farmers with consistent market access and reduced post-harvest losses. We are positioned to become the definitive standard for fresh food delivery in East Africa.

Vission :

To become East Africa's most trusted digital fresh-food ecosystem, empowering local farmers with direct market access while guaranteeing every urban household instant reliability in nutrition.

Mission :

- ✓ Bridge the Market Gap: Connect Nairobi's 6 million residents directly with local agriculture through a seamless digital marketplace.
- ✓ Guarantee Speed & Reliability: Deliver farm-fresh produce to doorsteps in under two hours by leveraging technology and strategic logistics partnerships.
- ✓ Enforce Quality Standards: Maintain strict packaging and quality guidelines across all supplier partners to build enduring customer trust.
- ✓ Empower Local Economies: Create sustainable income streams for partner farmers while reducing post-harvest food waste through efficient demand-driven sourcing.

Our vision isn't just to be a delivery app; it's to become the primary infrastructure for fresh food in East Africa. Our mission is executed through a unique asset-light model where we control the quality and the customer experience, while leveraging existing logistics networks to achieve delivery times of under two hours. This approach allows us to scale rapidly across Nairobi's 6 million residents while ensuring our partner farmers get fair, consistent access to the market.

Our Business Model

Tunzar operates on an asset-light, partnership-driven model designed for efficiency and quality:

- Sourcing: We have partnered with key farmers and suppliers within the city to ensure fresh sourcing.
- Quality Control: All partners adhere to strict Tunzar quality and packaging guidelines, ensuring consistency and freshness.
- Logistics: Leveraging existing delivery infrastructure (such as Bolt Logistics), we optimize last-mile delivery to ensure speed and cost-effectiveness.

Value Proposition.

- Our primary promise is reliability and trust. By controlling the packaging standards and utilizing established logistics networks, Tunzar guarantees delivery in under two hours, bridging the gap between local farmers and urban consumers seamlessly.

Market Opportunity

Target Market: Nairobi Metropolitan Area

- Population: 6 million residents (Kenya National Bureau of Statistics, 2024)
- Urbanization Rate: Growing at 4.2% annually, driving increased demand for convenient food solutions.
- Internet Penetration: 85% smartphone adoption in Nairobi, with mobile money (M-Pesa) usage exceeding 90%—creating a ready-made digital commerce ecosystem.

Total Addressable Market (TAM)

KES 45 Billion/year – Annual fresh produce spend across Nairobi Metro (6M residents × ~KES 625/month per capita on fresh food)

Serviceable Addressable Market (SAM)

KES 18 Billion/year – Urban, middle-to-high income households (approx. 40% of population) with smartphone access and disposable income for delivery

Serviceable Obtainable Market (SOM)

KES 1.8 Billion/year (Year 3 Target) – Capturing 10% of SAM through aggressive customer acquisition and retention

The Gap Tunzar Addresses

- **Post-Harvest Losses:** 30-40% of fresh produce in Kenya is lost between farm and consumer due to fragmented supply chains and poor storage (FAO, 2023). Tunzar's direct-to-consumer model reduces this waste.
- **Informal Market Dominance:** 80% of fresh produce in Nairobi is still purchased through open-air markets and roadside vendors, where quality is inconsistent, pricing is opaque, and delivery is non-existent.
- **Rising Consumer Expectations:** Nairobi's growing middle class increasingly values convenience, quality assurance, and time-saving solutions—trends accelerated by post-pandemic digital adoption.

Growth Tailwinds

✅ **E-Commerce Boom:** Kenya's e-commerce market is projected to grow at 25% CAGR through 2027 (Google & Temasek, 2024).
✅ **Mobile-First Population:** 96% of internet users in Kenya access the web via mobile devices—perfectly aligned with Tunzar's app-first strategy.
✅ **Logistics Infrastructure:** Mature third-party delivery networks (Bolt, Glovo, Uber) enable asset-light scaling without heavy CAPEX.
✅ **Policy Support:** Kenyan government initiatives like the Digital Economy Blueprint and agricultural value-chain funding create a favorable regulatory environment.

Competitive White Space

SEGMENT	CURRENT PLAYERS	TUNZAR'S ADVANTAGE
Supermarkets	Carrefour, Naivas, Quickmart	Next-day delivery, limited fresh selection, higher prices
Quick-Commerce	Glovo, Uber Eats	Focused on prepared food, not fresh produce; limited quality control
Farm-to-Table Startups	Small, fragmented players	Limited scale, inconsistent logistics, narrow geographic coverage, low quality produce

Tunzar's Position: We occupy the unique intersection of fresh produce specialization, under-2-hour delivery, and quality-guaranteed sourcing—a segment currently underserved in Nairobi's 6 million-person market.

How It Works: The Tunzar Operational Engine

Tunzar's asset-light, technology-enabled model ensures freshness, speed, and reliability at every step. Our four-stage process is designed for scalability, quality control, and partner empowerment.

Sourcing

partner network

1. Vetted Suppliers: We partner with pre-qualified farmers and aggregators within a 100km radius of Nairobi, ensuring short supply chains and peak freshness.
- Digital Onboarding: Partners join via a simple supplier portal, agreeing to Tunzar's Quality & Packaging Guidelines (QPGs).
- Demand-Driven Harvesting: Our platform shares real-time order forecasts with partners, enabling harvest-to-order planning that minimizes waste.
- Fair Pricing: Transparent, algorithm-driven pricing ensures farmers receive competitive rates while maintaining retail affordability.

Key Metric: 95% of produce sourced within 24 hours of order placement.

Quality Check

hub

- Collection Points: Partners deliver produce to Tunzar's micro-fulfillment hubs located strategically across Nairobi.
- 3-Point Inspection: Every item undergoes:
  a. Visual Check: Freshness, ripeness, damage assessment.
  b. Weight/Volume Verification: Ensures order accuracy.
  c. Packaging Audit: Items are repackaged in Tunzar-branded, eco-friendly materials that preserve freshness during transit.
- Rejection Protocol: Sub-standard items are rejected at the hub (not at the customer's door), with feedback loops to help partners improve.
- Cold Chain Lite: Temperature-sensitive items are stored in short-term chillers at hubs pending dispatch.

Key Metric: <2% customer return rate due to quality issues.

Logistics

Orchestration & Routing

- Dynamic Routing Engine: Our proprietary algorithm batches orders by neighborhood and optimizes delivery routes in real-time.
- 3PL Integration: We integrate via API with established last-mile providers (Bolt, Glovo, local courier networks) to access a flexible fleet of riders without owning vehicles.
- Smart Dispatch: Orders are assigned to the nearest available rider based on:
  - Proximity to hub
  - Current load capacity
  - Traffic conditions (via Google Maps API)
  - Customer delivery window preference
- Real-Time Tracking: Customers and support teams can track orders live from hub to doorstep.

Key Metric: Average dispatch-to-pickup time: <8 minutes.

Delivery

& feedback

- Under-2-Hour Promise: From order confirmation to doorstep delivery, our SLA is 120 minutes maximum.
- Contactless & Secure: Riders follow standardized handoff protocols; payments are digital-first (M-Pesa, card, wallet).
- Instant Feedback: Post-delivery, customers rate their experience on:
  - Produce freshness
  - Delivery speed
  - Rider professionalism
- Data-Driven Improvement: Feedback flows directly to:
  - Supplier Scores: Low-rated partners receive coaching or are offboarded.
  - Logistics Performance: Rider/3PL ratings inform future dispatch decisions.
  - Product Recommendations: Purchase history fuels personalized app experiences.

Key Metric: 4.8/5 average customer satisfaction score (CSAT).

Business Model & Unit Economics

Tunzar operates a high-margin, asset-light marketplace model with clear, predictable unit economics. Our revenue scales linearly with order volume, while our variable cost structure ensures profitability improves with growth

Revenue Projections: 100 Daily Clients

Conservative baseline assuming steady-state operations at 100 orders/day

Period	Orders/Day	Daily Revenue	Monthly Revenue	Annual Revenue
Baseline	100	KES 100,000	KES 3,000,000	KES 36,000,000
Gross Profit (30%)	100	KES 30,000	KES 900,000	KES 10,800,000

USD Equivalent (at ~KES 130/USD):

- Annual Revenue: ~$277,000 USD
- Annual Gross Profit: ~$83,000 USD

Business Model & Unit Economics

Growth Trajectory: Scaling Beyond 100 Orders/Day
Realistic ramp-up based on Nairobi market penetration

Order Volume Growth Projection

Months 1-3 (Launch Phase)
• Target: 50 orders/day
• Monthly Revenue: KES 1.5M | Gross Profit: KES 450K

Months 4-6 (Stabilization)
• Target: 100 orders/day ✅ (Our baseline)
• Monthly Revenue: KES 3.0M | Gross Profit: KES 900K

Months 7-12 (Growth Phase)
• Target: 150-200 orders/day
• Monthly Revenue: KES 4.5-6.0M | Gross Profit: KES 1.35-1.8M

Year 2 Projection
• Target: 300+ orders/day
• Annual Revenue: ~KES 108M | Gross Profit: ~KES 32.4M

Business Model & Unit Economics

Growth Trajectory: Scaling Beyond 100 Orders/Day
Realistic ramp-up based on Nairobi market penetration

Order Volume Growth Projection

Months 1-3 (Launch Phase)
• Target: 50 orders/day
• Monthly Revenue: KES 1.5M | Gross Profit: KES 450K

Months 4-6 (Stabilization)
• Target: 100 orders/day ✅ (Our baseline)
• Monthly Revenue: KES 3.0M | Gross Profit: KES 900K

Months 7-12 (Growth Phase)
• Target: 150-200 orders/day
• Monthly Revenue: KES 4.5-6.0M | Gross Profit: KES 1.35-1.8M

Year 2 Projection
• Target: 300+ orders/day
• Annual Revenue: ~KES 108M | Gross Profit: ~KES 32.4M

🚀 Investment Ask: KES 400,000 Seed Round

Tunzar is seeking KES 400,000 (~$3000) in pre-seed capital for 20% shareholding to launch operations, acquire our first 1,000 app downloads, and reach the 100-orders-per-day breakeven threshold within 6 months.

This is a capital-efficient, milestone-driven round designed to de-risk the business and position Tunzar for either profitability or a larger Series A raise.

Use of Funds: Lean Launch Budget

Category	Allocation (KES)	% of Total	Specific Use Cases
Marketing & User Acquisition	210,000	52%	Launch campaigns (social media, influencer partnerships, referral bonuses), initial CAC for first 1000 downloads
Working Capital	160,000	38%	Farmer payment float (48-hour settlement), packaging inventory, contingency buffer
Operations & Team	40,000	10%	Part-time ops coordinator, customer support tools, legal/compliance basics
TOTAL	400,000	100%	

Milestones This Capital Achieves

6-Month Launch Roadmap (KES 400K Budget)

Month 1-2: Launch & Initial Traction

✅ Soft launch in 2 high-density Nairobi neighborhoods (Westlands, Kilimani)
✅ Acquire first 500 registered users via targeted digital campaigns
✅ Achieve 50 orders/day average
✅ Validate unit economics: confirm 30% gross margin holds at scale
✅ Collect & act on early customer feedback (app UX, delivery experience)

Month 3-4: Growth & Optimization

✅ Expand to 2 additional neighborhoods (Lavington, Parklands)
✅ Grow to 1,000 registered users total
✅ Increase to 75 orders/day average
✅ Improve 30-day customer retention to 50%+ via referral program & personalized offers
✅ Optimize logistics routing to reduce average delivery time to <90 minutes
✅ Begin A/B testing on AOV lift strategies (bundles, upsells, subscription hints)

Month 5-6: Scale to Breakeven

✅ Reach 100 orders/day sustained ✅ (Operational Breakeven Point)
✅ Achieve 60%+ 30-day customer retention
✅ Maintain 30%+ gross margin while scaling
✅ Prepare metrics deck for Series A funding or bootstrap to profitability ($50K target)
✅ Evaluate expansion to satellite towns (Kiambu, Ruiru) or B2B vertical (offices, restaurants)

Meet the Founder

Nickson Mburugu
Founder, Tunzar

I founded Tunzar with a clear mission: to modernize Nairobi's fresh food supply chain. With a dual background in **Agri-Business Management and Technology,** I combine deep operational expertise with a nuanced understanding of the Kenyan agricultural consumer landscape.

Why Tunzar?

After spending **5+ months conducting intensive market research** across Nairobi, I identified a critical gap: consumers demand fresh, reliable delivery, while farmers lack consistent market access. Rather than launching prematurely, I validated the unit economics and customer needs first—resulting in Tunzar's **asset-light, 30%-margin model.**

Execution Track Record:

- **Product Development:** I successfully oversaw and funded the end-to-end development of the Tunzar mobile and web platform—which is **now launch-ready.**
- **Supply Chain Secured:** I established initial onboarding and agreements with **120+ key farmers, suppliers, and logistics partners** to ensure supply depth and <2-hour delivery capability.
- **Market Validation:** I led the primary research phase across Nairobi Metropolitan Area, defining the **100-orders/day breakeven model.**

Previous Experience:

- **Founder, FarmerQue Consult Ltd:** I founded an agricultural consultancy helping farmers grow healthy crops and linking them to various markets. This experience provided the foundational network and supply chain insights that will power Tunzar today.

Meet the Founder

💡 Why Invest With Me? (Investor Summary)

Strength	Evidence
Domain Expertise	I founded FarmerQue Consult Ltd; I understand farmer pain points and supply chain logistics deeply.
Execution Risk Low	I already built the app. Your capital goes to growth, not development.
Supply De-risked	I've onboarded 120+ partners—the supply chain is ready for launch.
Data-Driven	I spent 5+ months researching before launch; unit economics are validated (30% margin).
Capital Efficient	I'm seeking only KES 400K to reach breakeven; I run a highly lean operation.
